C. 希格瑪 Sigma

time limit 1s memory limit 128MB

Statement

給定 N,試求:

$$\left(\sum_{K=1}^{N^2} \lfloor \sqrt{K} \rfloor \right) \pmod{10^9+7}$$

Input

N

Output

Ans

Sample Input

3

Sample Output

16

$$\sum_{K=1}^{3^2} \left\lfloor \sqrt{K} \right
floor = \left\lfloor \sqrt{1}
ight
floor + \left\lfloor \sqrt{2}
ight
floor + \ldots + \left\lfloor \sqrt{9}
ight
floor = 16$$

Note

- $1 \le N \le 10^{18}$ $10^9 + 7$ 是質數
- 所有輸入輸出皆為整數

Subtask

- *subtask1*: $8\% \ N \le 10^3$
- subtask2: $23\%~N \le 10^6$
- subtask3: 69% As statement
